

ENERGY POLICY

EURIMAC S.A. is committed to reducing its energy consumption and greenhouse gas emissions in its facilities, with the aim of sustainable development.

The company's goal is to manufacture quality pasta, protecting the environment and using energy efficiently. This goal is to be achieved by installing and maintaining energy saving measures and an Energy Management System.

EURIMAC, committed to minimize atmospheric impacts, records air pollutants beyond greenhouse gas emissions—including NO_x, SO₂, and fugitive particulate matter. All measurements are performed by a certified external body to ensure accuracy and compliance with regulatory requirements. The company also implements robust mitigation measures, such as particle-retention filtration systems and the regular maintenance of combustion units, to further reduce emissions and safeguard air quality. The company's commitment is based on the following principles:

- ❖ To continuously reduce energy consumption and increase energy performance, while maintaining the quality level of its products.
- ❖ Reducing greenhouse gas emissions and generally improving its carbon footprint.
- ❖ In seeking and eliminating every area of energy waste, through regular review of its processes.
- ❖ In monitoring and implementing legislative and regulatory requirements related to energy.
- ❖ The implementation and certification of an Energy Management System according to ISO 50001 with the aim of continuously improving energy performance.
- ❖ In defining goals during the operation of the Energy Management System. These goals are reviewed on an annual basis and the result of the review leads to the definition of new or improved goals.
- ❖ The availability by top management of the required resources to enable the achievement of energy goals.
- ❖ In communicating to all employees the energy policy, the objectives of the Energy Management System and the actions to achieve them and the results of these actions. Employees receive information and training on energy saving issues, which they can apply - beyond their work - and in their environment.

The commitment to reducing energy consumption and improving energy performance is a goal and responsibility for every member of Management and every employee of the company.
